Power Macintosh 5200: Level 2 Processor Cache (12/95)

=====
Article Created: 16 June 1995
Article Reviewed/Updated: 19 December 1995

TOPIC -----

I have a Power Macintosh 5200 series computer. I realize that the computer comes with 256K Level 2 processor cache, but is it possible to upgrade the cache?

DISCUSSION -----

Since the cache card on this computer also contains the computer's read-only memory (ROM), it would be necessary to purchase a cache card which would include the ROM.

Because of this requirement, Level 2 cache cards used on other Power Macintosh computers will not work with this computer.

Apple Computer, Inc. does not manufacture a higher-capacity cache card for this computer.
