Open Transport: LocalTalk in Appletalk Panel (8/95)

=====  
Article Created: 11 July 1995  
Article Reviewed/Updated: 22 August 1995

TOPIC -----

I have a new Power Macintosh 9500 computer. In the AppleTalk control panel under "Connect via", I have an option for "LocalTalk" in addition to "Ethernet", "Printer port", and "Modem port". Where did that come from?

DISCUSSION -----

You have installed the Apple Internet Router software, which is not compatible with the new Open Transport software in System 7.5.2.

Remove the "Router", "LocalTalk (Built-in)", and "LocalTalk (Modem)" files from your Extensions folder and restart you Power Macintosh.
