PowerShare 1.1 Collaboration Servers Tech Specifications (9/95)

=======================================================================

Article Created: 21 September 1995

TOPIC -------------------------------------------------------------

This article provides the technical specifications and order information for
PowerShare 1.1 Collaborative Servers software.

DISCUSSION --------------------------------------------------------

Technical Specifications
-----------------------
```

New features in PowerShare 1.1
• Improved server routing performance that gets messages to their
  destinations up to three times faster
• Ability to import tab delimited text files containing data such as
  Internet addresses and telephone listings
• Ability to store Internet addresses in a PowerShare catalog and manage
  them from within the PowerShare Admin application
• Apple Migration Tool for Microsoft Mail, for transferring e-mail and user
  account information from a Microsoft Mail for AppleTalk Networks server
  to a PowerShare server

PowerShare Mail server
• Provides server-based messaging services for PowerTalk users
• Stores PowerTalk messages to ensure delivery when user systems come
  online
• Saves disk space on client workstations

PowerShare Catalog server
• Stores collaborative information—such as group addresses, document
  templates, graphics, and sounds—in shared catalogs
• Authenticates users and encrypts their network traffic (including e-mail)
• Supports distributed systems of multiple servers
• Replicates and synchronizes catalogs across multiple servers for higher
  performance and greater reliability
• Enables multiple collaborative applications to share a single catalog

PowerShare Admin utility
- Lets administrators create user accounts and define groups
- Monitors mail and catalog servers to detect problems
- Provides system alerts to administrators
- Permits server management from any Macintosh system on the network

Easy Setup utility
- Lets administrators quickly configure a simple PowerShare system

System requirements
- One of the following systems:
  — An Apple Macintosh computer with a 68020 or later processor
  — A Power Macintosh computer
  — Any other similarly equipped Mac OS-based computer
- At least 8MB of RAM
- Macintosh System 7.5 or later with PowerTalk* installed
- A hard disk drive
- An AppleTalk connection
- Client computers: Macintosh, PowerBook, Power Macintosh, and/or other Mac
  OS-based client computers running Macintosh System 7.5 or later with
  PowerTalk* installed and an AppleTalk connection (direct or via Apple
  Remote Access software)

* The PowerTalk software included in Macintosh System 7.5 provides a single
universal mailbox for all incoming messages from many sources, supports the use
of collaborative applications to work together over a network, and lets users
set up catalogs (directories) of personal information.

Ordering Information

PowerShare Collaboration Servers
Order No. M1907Z/D
- PowerShare version 1.1 server software, including PowerShare Mail server,
  Catalog server, Admin, and Easy Setup software
- Apple Migration Tool for Microsoft Mail, for transferring information
  from a Microsoft Mail for AppleTalk Networks server to a PowerShare
  server
- PowerShare System Administrator's Guide
- PowerTalk and PowerShare Solutions Guide
