Personal LW SC: Use Regular Tray W/ Desktop Printing (10/95)

======================================================================

Article Created: 16 October 1995
Article Reviewed/Updated: 19 October 1995

TOPIC -----------------------------------------------------------

When printing using the manual feed option on the Personal LaserWriter SC with
desktop printing enabled, the computer bombs with a bus error.  This does not
happen with desktop printing disabled. How can I correct this?

DISCUSSION ------------------------------------------------------

There is a conflict between the Desktop PrintMonitor and the Personal
LaserWriter SC driver.  When printing using the manual feed, the bus error
occurs.  This conflict occurs with both Desktop PrintMonitor versions 1.0.1 and
1.0.3.

The problem is related to the method that the drivers use to communicate with
the printers during certain functions. The solution has been identified by
engineering and is scheduled to be fixed in the next revision of the Desktop
Printing software.

The present workaround is to use the regular paper tray, and not manual feed.
