PowerBook 5300 & 190: System SW Custom Install Options (10/95)

=======================================================================

Article Created: 27 October 1995

TOPIC -------------------------------------------------------------

This article describes the Custom Install options of the System 7.5.2 installer

DISCUSSION --------------------------------------------------------

The System 7.5.2 Custom Install for the PowerBook 5300 series and PowerBook 190
series contains some new items and some differences not found with previous
System 7.5.x installers.

Some differences:
-----------------
• If you need to re-install the PC Card extensions there is a custom install
option called PC Card Modem Files. This installs the PC Card Modem extension and
the PC Card extension in the extensions folder. These extensions are designed by
Apple and are required if PC cards are being used in the PowerBook. Many
third-party PC Cards will require the additional drivers or other software
provided by the vendor of the card.

• There is no custom installation option for MacTCP listed under Control Panels
and MacTCP is not part of an Easy Install. To install MacTCP 2.0.6:

Step 1
------
Launch the Installer, click Continue to get to the Installation Window.

Step 2
------
Click on the upper left pop-up menu and choose Custom Install. Scroll down to
locate the Networking Software section. Click on the triangle next to Networking
Software to expand the list.

Step 3
------
```

Click in the box next to TCP/IP. Click Install. This places MacTCP 2.0.6, the
MacTCP DNR, and MacTCP Prep file in your System Folder.

Here is the entire list of what can be custom installed in System 7.5.2:
