PowerTalk INET Gateway & Open Transport Compatibility (11/95)

===

Article Created: 6 November 1995

TOPIC ---

When using the Mail*Link Internet for PowerTalk (PT/INET) Gateway 1.6 on my
PCI-based Power Macintosh, the gateway will connect once but not again until I
restart the computer. What is wrong?

DISCUSSION ---

This is a known issue which Apple is investigating. Below is a quote from the
Mail*Link for PowerTalk/INET 1.6 Read Me file:

"Open Transport users: This gateway does not function correctly when used with
Apple's OpenTransport. The gateway will connect one time but will not reconnect
without a reboot. Apple is currently investigating problem."
