Performa: MacTCP 2.0.4 to MacTCP 2.0.6 Update Issue (11/95)

=====  
Article Created: 14 November 1995

TOPIC -----

I have a Performa, and the MacTCP 2.0.4 control panel that came with my computer cannot be updated with the MacTCP 2.0.6 Update installer, an error is reported. I have restored my System Software and the update installer still does not work. What is wrong?

DISCUSSION -----

The MacTCP 2.0.4 control panel that ships with Performa computers cannot be updated using the MacTCP 2.0.6 Update installer. You should use the System 7.5 Update 1.0 which includes MacTCP 2.0.6.

The System 7.5 Update 1.0 will install MacTCP 2.0.6 if it finds an older version in the Control Panels folder. Otherwise, you can use the custom install feature in the System 7.5 Update 1.0 installer by following the steps below:

- 1) Choose Custom Install in the pop-up menu.
- 2) Click the triangle next to Control Panels to expand these options.
- 3) Click the checkbox next to MacTCP to select it.
- 4) Click the Install button.
