Newton 2.0 OS: Deleting a Backup from a PC Card (1/96)

=====

Article Created: 25 January 1996

TOPIC -----

I have a MessagePad 120 which has recently been upgraded to the Newton 2.0 OS. I created a backup on my card and now I want to delete it. When I select the PC card, all I see is "Erase," "Restore," and "Backup," but no "Delete Backup."

DISCUSSION -----

Previously using the Newton 1.x OS, the Erase option only erases the card. With the Newton 2.0 OS, if you tap Erase, you get additional options such as Entire Card, Backup Only, and Information Only.

You should select Backup Only. When you do, the rest of the information and packages are protected.
