PC Card Support for Desktop Macintosh Computers (1/96)

=====

Article Created: 5 February 1996

TOPIC -----

This article lists a third party solution that provides PCMCIA (also called PC card) support for desktop Macintosh computers.

DISCUSSION -----

Software Architects' PowerCard is a SCSI PCMCIA adapter which will work on most desktop Macintosh computers. The device accepts PCMCIA Type I, II, and III storage cards (including SRAM, flash RAM, and hard disk cards). It has a SCSI-2 interface, and is compatible with SCSI Manager 4.3.

In addition, it ships with Dayna Communications' DOS Mounter software, plus Software Architects' own driver; the combination makes it possible for users to mount DOS-formatted PCMCIA cards.

This article provides information about non-Apple products. Apple Computer, Inc. is not responsible for its content. Please contact the vendors, Software Architects or Dayna Communications, for additional information.

The Tech Info Library article titled "Locating Vendor Information" can help you search for a particular vendor's address and phone number.
