Cyberdog Beta 1.0 Bugs List (4/97)

=====
Article Created: 8 March 1996
Article Reviewed/Updated: 9 April 1997

TOPIC -----

This article is the Cyberdog Beta 1.0 Bugs List as of 12 Feb 1996.

DISCUSSION -----

Welcome to the Cyberdog List of Frequent Bugs. This document is the second stop to the Cyberdog Bug Reporting System. Below you will find a listing of the most frequently found bugs from both our testing efforts and general users. Please check over this list before submitting a bug in the event that it has already been found.

Last Updated - 02/12/96

B1 Bugs

- connecting to an FTP server with a username with a period will fail.
- dragging files with names greater than 31 characters out of FTP will give an error. (workaround: use the Get Item from Server menuitem)
- extremely long gopher listings will sometimes hang on systems running 7.5.3
- Account Info in the Trays menu is activated when a message is selected
- email enclosures to some online services (e.g. AOL) are not received correctly.
- can not drag from the background of a mail window
- mail and news handlers dialog does not let you tab between fields

- can not sort by Status in the Out Tray

A3 Bugs

- Still using A3 and having trouble launching Cyberdog? Get a weird "GetURLPlugIns" error? - [Click Here](#) for the solution.
- Closing windows before they finish drawing will crash (seen most often in mail) - Fixed in B1
- Sometimes Cyberdog mail will get into a state where if you try to download or send mail, you will get an error dialog "...an unknown error occurred for an uncertain reason..." If this happens to you, closing all of the Cyberdog windows and starting again should fix it. - Fixed in B1

Article Change History:

- 09 Apr 1997 - Removed out dated on line references.
- 03 Mar 1997 - Changed title to reflect Beta 1.0 software.
