Open Transport 1.0.8: AppleTalk Actived By Applications (4/96)

==

Article Created: 8 April 1996

TOPIC ---

I have Open Transport version 1.0.8 installed on my Power Macintosh 7200 and
when I try to print to my LaserWriter Select 310 printer I get a -97 error (port
in use). I restarted, then reset the Parameter RAM (PRAM), and now I get -43
error (file not found). I went into the chooser and AppleTalk was active. I made
AppleTalk inactive and restarted. I could print from SimpleText, but not from
Quark Xpress. When I tried to print from Quark Xpress I received the -97 error
again.

DISCUSSION --

Open Transport v1.0.8 activates AppleTalk, which causes the -97 error. This
issue is addressed in Open Transport v1.1. The System 7.5 Update 2.0 should
solve this problem. There are several applications which O.T. 1.0.8 activates
AppleTalk including MegaPhone, PageMaker, and Quark Xpress. However, there may
be other applications this also occurs with.

Solution
========
Use the System 7.5 Update 2.0 software to update your version of Open Transport
to v1.1.
