Power Macintosh Logic Board Upgrades: Specifications (4/96)

=====

Article Created: 15 April 1996  
Article Reviewed/Updated: 19 April 1996

### TOPIC -----

This article lists the technical specifications for the Power Macintosh Logic Board Upgrades including the Logic Board Upgrades Compatibility table.

### DISCUSSION -----

#### Power Macintosh Logic Board Upgrades =====

##### Power and speed -----

- Processor upgrade card must be purchased separately; see chart for available options

##### Memory and storage -----

- Power Macintosh 7600 upgrade can use existing RAM from upgraded system; includes 256K L2 cache with 7600 logic board upgrade
  - Power Macintosh 8500 logic board upgrade includes 8MB of RAM and 256K level 2 cache
  - Both upgrades retain existing hard disks from upgraded system
- Video support, expansion, setup, system software, compatibility, and communications
- Identical to corresponding Power Macintosh models  
(For detailed specifications on the Power Macintosh 7600 and 8500 series computers, see the appropriate product data sheets.)
  - Includes accessory kit with CD-ROM disc containing system software version 7.5.3

##### Installation -----

- Must be installed by an authorized Apple reseller or service provider

Begin \_Table

Logic Board Upgrades Compatibility

=====

Macintosh Model*	7600 Series	8500 Series
