PowerTalk: Alias of the Mailbox (4/96)

======================================================================

Article Created: 18 April 1996

TOPIC -----------------------------------------------------------

Why can't I make an alias of the PowerTalk Mailbox. The Finder simply
deselects the mailbox when an attempting to make the alias.

DISCUSSION ------------------------------------------------------

This issue was addressed with System 7.5.3 and the System 7.5 Update 2.0.  You
can now select the PowerTalk mailbox and choose the Make Alias command from the
File menu.  The alias will be created on the desktop and will open the PowerTalk
mailbox.
