AppleShare: Move File to Different Folder, Creates Copy (4/96)

=====
Article Created: 22 April 1996
Article Reviewed/Updated: 25 April 1996

TOPIC -----

With AppleShare 4.1 on a Workgroup Server 8150/110, when I logon as a user, a file is copied when moved between two folders on the same volume. When I logon as the administrator, or in front of the server computer, the file is moved, not copied.

DISCUSSION -----

This happens because as a user, you do not have access privileges necessary to move the file. You can do one of the following:

- Place the folders inside a single shared folder the user has See Folders, See Files, and Make Changes privileges. You should now be able to move the file rather than copy it.
- Give the user Make Changes privileges to the volume, or to additional folders.
