Map CP Does Not Observe Daylight Savings Time (5/96)

===

Article Created: 13 May 1996

TOPIC ---

I am running System Software 7.5. When I check the Daylight Savings Time check
box option in the Date & Time control panel, the Map control panel changes my
selected city in the Time Zone and my time is off by 1 hour. I have updated to
System Software 7.5 Update 2.0 and I still have this problem. What's wrong and
how can I avoid this problem?

DISCUSSION --

 When the Daylight Savings Time (DST) check box is checked in the Date & Time
control panel, by design, the time will advance by 1 hour. Unfortunately, the
Map control panel does not recognize this option being checked when the set
button is clicked. As a side effect, the Map control panel incorrectly selects
the time zone next to the correct one (1 hour off) and defaults to the city that
is alphabetically first in that time zone. This problem should be fixed in a
future version of the Map control panel. Currently, there are two workarounds
to avoid this problem: 1) If the Daylight Savings Time check box option is
checked, don't select the Set button in the Map control panel after setting the
correct Time Zone and time in the Date & Time control panel. When changing Time
Zones, change cities only in the Date & Time control panel since it recognizes
the Daylight Savings Time option. Or 2) If a user wants to be able to change the
set location in the Map control panel, make sure the Daylight Savings Time check
box option is unchecked in the Date & Time control panel. Set the correct Time
Zone and time manually in the Date & Time control panel. Now the set button
should work correctly in the Map control panel.
