PC Compatibility Card: Text Cutoff at Edge of Page (5/96)

===

Article Created: 20 May 1996

TOPIC ---

I have a PC Compatibility Card in my Power Macintosh computer. When I print to
my QuickDraw printer from the PC side, text near the top and bottom of each page
doesn't print or is cut off, or text that should print at the bottom of one page
prints on the next page.

DISCUSSION --

Try choosing "No gaps between pages" in the PC Print Spooler Preferences dialog
box, then print again. When you print after choosing this option, the PC Print
Spooler software prints 66 lines per page instead of 60 lines per page.

Steps to Select No Gaps Between Pages
=====================================

Step 1

Go to Extensions folder in System Folder

Step 2

Double-click PC Print Spooler

Step 3

Go to the File menu and select Preferences

Step 4

Select "No gaps between Pages"

Step 5

```
------
```
Click OK

If "No gaps between pages" is selected in the PC Print Spooler Preferences
dialog box, but text near the top and bottom of each page still does not print
or is cut off, find out the minimum margins for your printer. Most laser and ink
jet printers cannot print close to the edges of a page. Then set the top and
bottom margins to at least these amounts in the DOS or Windows application you
are using.
