QuickMorph and Apple Menu Options (6/96)

=====
Article Created: 05 June 1996

TOPIC -----

I just purchased a Power Macintosh 5400/120. I installed Hypercard 2.3.3, which comes bundled with AddMotion II. Every time I try to use the QuickMorph component of the AddMotion II software, it crashes. What can I do about this?

DISCUSSION -----

Try deselecting the "Remember recently used items" checkbox in the Apple Menu Options control panel. Follow these steps to deselect this checkbox:

Step 1

Select Control Panels from the Apple Menu

Step 2

Double-click the Apple Menu Options icon.

Step 3

Click the checkbox labeled "Remember recently used items" to deselect it.
