PowerTalk Mail Reader 1.1 Read Me (6/96)

=====

Article Created: 17 June 1996

TOPIC -----

The following article is the ReadMe document for the PowerTalk Mail Reader 1.1.

DISCUSSION -----

Important Information About the PowerTalk Mail Reader Control Panel

=====

System requirements

To use PowerTalk Mail Reader, you must use Macintosh system software version 7.5.3 or later. PowerTalk Mail Reader does not work with earlier versions of system software.

What is PowerTalk Mail Reader?

PowerTalk Mail Reader lets you select the application for reading standard AppleMail-type letters. After you use the reader to choose an application, that application opens all AppleMail letters you receive.

How to install PowerTalk Mail Reader

To use PowerTalk Mail Reader, drag its icon to your Control Panels folder and restart the computer. (The control panel takes approximately 15K of disk space, with an additional 1K for the MailReader Preferences file.)

How to remove PowerTalk Mail Reader

To remove PowerTalk Mail Reader, drag the PowerTalk Mail Reader control panel and the MailReader Preferences file (in the Preferences folder in the System Folder) to the Trash.

How to use PowerTalk Mail Reader

To use the PowerTalk Mail Reader, double-click its icon. Click Change. In the dialog box that appears, select the desired application.

To revert to AppleMail, click Select AppleMail.

Compatible AppleMail readers

AppleMail letters use a format called Standard Interchange Format (SIF). Any application that can read SIF can read AppleMail letters. The following applications read SIF:

- BBEdit 3.0
- ClarisWorks 3.0
- MacWrite Pro 1.5
- Microsoft Word 6.0
- Nisus Writer 4.0
- WordPerfect 3.0
- PowerMail 1.0

Some mail-reading applications also read other file formats. For example, some can read text and pictures, but not sound or movies. Contact the application's publisher for a complete description of its features.
