PC Compatibility Card: Create New Drive Containers (7/96)

=====

Article Created: 19 July 1996

TOPIC -----

I have a PCI-based PC Compatibility Card, and I am having trouble trying to use the drive container from one of the earlier DOS Compatibility Card I had installed in my Power Macintosh 6100 computer. Can I use my previous drive containers?

DISCUSSION -----

The PCI-based PC Compatibility Cards have significant hardware differences from the earlier DOS Compatibility Cards. Although the drive containers have not changed, many of the previous drivers, including video drivers and sound drivers, will not work correctly on the PCI-based PC Compatibility Cards.

To ensure proper operation of the PCI-based PC Compatibility Cards, you should create a new drive container and install the drivers that come with the PC Compatibility Card.
