Reinstalling System 7.5.3 Revision 2 Issue (7/96)

==

Article Created: 31 July 1996

TOPIC ---

I have already updated my system software to System 7.5.3 Revision 2 with the
Revision 2 installer. Now I need to reinstall System 7.5.3 Revision 2, but I get
this prompt when trying, "This system can not be updated. The system you want to
update might be on a different disk. If you think this might be the case then
click the 'Switch Disk' button below." How do I reinstall Revision 2?

DISCUSSION --

This will happen with any Mac OS compatible computer having had System 7.5.3
Revision 2 installed on it.

Workaround

Use the System 7.5 Update 2.0 installer, and preform a custom installation of
System 7.5.2 Update (under the System option). Then use the System 7.5.3
Revision 2 installer.

On computers which came with System 7.5.3 preinstalled (PCI Power Macintosh
7200/120, 7600/120, 8500/132/150, 9500/132/150) the System suitcase must be
reinstalled before Revision 2 will reinstall. Therefore reinstall the original
System software which came with the computer.
