Color OneScanner 600/27: 60 DPI Software Limitation (8/96)

=====
Article Created: 8 August 1996

TOPIC -----

The User's Guide for the Apple Color OneScanner 600/27 states that you can scan at 12 Dots Per Inch (DPI), however the Dispatcher software only gives the option of 60 or 75 DPI. How can I select 12 DPI?

DISCUSSION -----

The 12 DPI is the hardware limit of the scanner. The software lower limit, as you noticed, is 60 DPI. The Preview uses a 75 DPI scan and the thumbnails are interpolated in the software. The 12 DPI is not used with the Apple software. There may be other third-party software, such as plug-ins, that take advantage of the 12 DPI, but Apple is not aware of any.
