PC Compatibility Card: Configuring SoundBlaster in DOS (8/96)

===

Article Created: 13 August 1996

TOPIC ---

I'm trying to install the DOS SoundBlaster driver that came on the PC Utilities
CD of my PC Compatibility Card, but I can't find any setup files.

DISCUSSION --

The Sound directory on the Utilities CD has two setup files:

• W31SETUP.BAT
• W95SETUP.BAT

These setup files infer that a version of Windows is required. The manual does
not explicitly explain why there is no DOS Setup.

The DOS driver can be installed and configured by running the W31SETUP.BAT from
the DOS prompt. This setup file may also attempt to install some Windows files.
If Windows is not installed, the Windows applications can be bypassed by
performing a custom installation.
