Performa 6400: Demo Runs Automatically After Restore (11/96)

=====
Article Created: 5 November 1996

TOPIC -----

After restoring all the software on my Macintosh Performa 6400 series computer, the screen flashes while the desktop is appearing. Then, the Performa demo starts running automatically. How can I stop this?

DISCUSSION -----

The Restore All Software function on the Performa CD-ROM disc installs a Performa demo that automatically launches on startup. Before the demo launches, a script runs to verify that the display resolution is set to 640x480. This causes the flashing that you see as the desktop appears.

If, after restoring all software, you would like to stop the Performa Demo from automatically launching, remove the Launch Performa Demo or Launch Welcome Sequence files located in the Startup Items folder in the System Folder on the Hard Drive.
