     1. Equate Spreadsheet import problem fixed
     2. Motorola Marco names problem fixed

I. Updating the Newton Connection Kit to version 2.03
=====================================================

To upgrade your existing version of the Windows Connection Kit to version 2.03,
simply copy the following four files to a floppy diskette:

INSTALL.BAT
PATCH.EXE
PATCT.RTP
README.WRI

Once the floppy diskette is created with the 4 files, run the INSTALL program
from a DOS prompt by typing A:\Install.   The INSTALL program will locate your
existing NEWTON.EXE  and update it to version 2.03 of the Windows Connection
```

Kit.

II. Release Notes for Newton Connection 2.03
===

1. Equate Spreadsheet import problem fixed

The previous version of Windows Connection Kit did not allow spreadsheet data to
be imported and synchronized with Equate. This problem has been corrected.
Importing data with Equate requires translators provided by Holosoft Inc. If
you have not received these translators, contact Holosoft at 408.748.9648.

2. Motorola Marco names problem fixed

On the Motorola Marco, email data fields would not display in the Names
overview.   This has been fixed so that all data associated with internal apps
is now visible within the Overview window. This fix requires new
synchronization files to be generated in order to display all data.
