Writing and Publishing Tools bundle: Current Issues (1/97)

=====
Article Created: 7 January 1997

TOPIC -----

This article contains a list of known issues with the Writing and Publishing Tools bundle v1.1.

DISCUSSION -----

- At Ease sometimes draws a gray menu bar. However, the menu is still active and functional.
- Using At Ease to launch ClarisWorks, you are unable to access help features.

Workaround: Add "Claris Quick Help" to the application list for all users using the application preferences in At Ease.

- American Heritage Dictionary may sometimes crash with "Couldn't complete the last command because there was not enough memory...Result Code = -108".

Workaround: Increase application memory size to reduces the chance of encountering this error.

- Cannot get Aspects to work with ClarisWorks documents.

Workaround: The errata provides information about getting an upgrade which provides this feature.

- At Ease: when "Speak Button Names" is enabled and Virtual Memory is active, the voice stutters when the button name is spoken. This problem does not otherwise affect the performance of the application.

Workaround: Turn-off Virtual Memory.

- Digital Chisel: When quitting Digital Chisel, navigation window may sometimes remain open.

Workaround: Close navigation window, then quit.

- Media Weaver unable to paste pictures copied from the Scrapbook. There is no workaround.

Note:

Digital Chisel and MacLink Plus install the system software extensions QuickTime, and Sound Manager, or make them available for you to drag-install.
