PC Exchange: Floppy Format Problem (4/97)

=====
Article Created: 17 April 1997

TOPIC -----

I installed PC Exchange 2.0.7 on a Performa 5300 and it does not work. What is wrong?

DISCUSSION -----

PC Exchange 2.0.7 is only for use with those Macintosh models that can support one of the PC Compatibility Cards or the DOS Compatibility Card. It will not run on all systems and is only available in the PC Setup 1.5 installer.

The machines supported by PC Exchange 2.0.7 are as follows:

Power Macintosh 6100/60 and all Performa 61xx variations
Power Macintosh 6100/66 and all Performa 61xx variations
Power Macintosh 7200 and 8200 series
Power Macintosh 7500 and 7600 series
Power Macintosh 8500 and 8600 series
Power Macintosh 9500 and 9600 series
Power Macintosh 5400 series

Quadra 630, LC 630 and all Performa 63x and 640 models

Performa 580
Performa 6360 and 64xx series

Note: Some of the systems above were released after PC Exchange 2.0.7 was tested, so PC Exchange may have problems on some of the later models.

If you are having problems with PC Exchange 2.0.7, PC Exchange 2.1.1 is now available with Mac OS 7.6
