Mac OS 8: Claris EMailer Lite 1.1v4 and Sending Compressed Files

TOPIC

I received EMailer Lite 1.1v4 as part of Mac OS 8 internet access. I am unable to send compressed enclosures (the default setting).

DISCUSSION

Unlike the stand alone Claris EMailer-Lite Installer 1.1v3, the Installer inside IAFT in Mac OS 8 omits the "File Transfer Tools" file.

You will need to manually install Aladdin's DropStuff w/EE 4.0. The Installer for this software can be found following this path on your Mac OS 8 System:

- Internet folder
- Internet Utilities folder
- Aladdin folder
- DropStuff w/EE 4.0 Installer
