TITLE

Apple Studio Display 21: Description

Article ID: 58229
Created: 1/6/99
Modified: 1/13/00

TOPIC

This article provides a description of the new Apple Studio Display 21".

DISCUSSION

Color is indispensable to today's computer applications, whether you are producing magazines, creating business presentations, or designing multimedia materials.

The Apple Studio Display with ColorSync technology is an uncompromising monitor that provides accurate color for every situation. It combines lifetime color calibration with out-standing visual performance and a stunning appearance--all for little more than competitive monitors without those features.

The first thing you will notice about this Apple Studio Display is its striking appearance. Its elegant translucent enclosure and sleek design complements our newest Power Macintosh G3 systems and is also highly functional. It includes a four-port Universal Serial Bus (USB) hub, and its unique stand has room underneath to store your keyboard.

The Apple Studio Display with ColorSync technology uses a 21-inch (19.8-inch viewable image size) Trinitron CRT to deliver vivid colors and sharp text. The cylindrical design of this CRT creates a vertically flat screen that minimizes glare. The end result is a monitor that's a pleasure to view and to work with.

But the most important feature of the Apple Studio Display with ColorSync technology is its superior color accuracy--and its ability to maintain that accuracy over its lifetime. Using a patented internal measurement system, the monitor adjusts its electron beam as time passes to maintain the precise calibrations made at the factory. It can also compensate for changes in the ambient light. And because it stores its own ColorSync profiles, it can exchange accurate color information with the other devices in your production process, creating color consistency that directly translates into fewer trial-and-error stages when you output color documents.

The Apple Studio Display makes it easy to meet your specific needs and to compensate for changes in environmental conditions. A button on the display brings up the familiar Macintosh Monitors & Sound control panel on your computer, giving you powerful yet intuitive software control over all screen adjustments.

With its large screen, crisp Trinitron performance, ready-to-use USB ports, built-in color calibration, and elegant design, the Apple Studio Display with ColorSync technology is the complete monitor for demanding applications.

Exceptional Display Quality

- 21-inch (19.8-inch viewable image size) Sony Trinitron CRT
- aperture grill technology for vivid colors and sharp text
- vertically flat screen for reduced glare

Stunning Design

- elegant translucent case that matches Apples latest Power Macintosh G3 computers
- storage space under the display for your keyboard
- four-port USB hub for connecting peripherals

Built-In Color Calibration

- uses industry-standard ColorSync color management technology
- ensures consistent, accurate color over the lifetime of the monitor
- saves production time by creating accurate output with fewer trials

Easy Access to Powerful Software Controls

- Single-button access to the familiar Macintosh Monitors & Sound control panel
- intuitive control over all screen adjustments

Ordering Information

- Apple Studio Display with ColorSync technology
- order No.M6204LL/A
- Apple Displays software
- VGA-to-Macintosh adapter
- power cord
- ambient light tool
- user's setup guide
- limited warranty
