TOPIC

This article provides a description of the Apple Studio Display 17".

DISCUSSION

Looking for a monitor that's big enough to keep you productive, without taking up too much of your desk space--or your budget?

The perfect companion to your new Power Macintosh G3 system, the Apple Studio Display combines a gorgeous screen, a stunning look, and a competitive price. It's a great choice for a wide variety of applications from business to education to science and engineering to the home.

The first thing you'll notice about the Studio Display is its striking appearance. Its elegant translucent enclosure and sleek design complement our newest computer systems. And its unique stand even has room underneath to store your keyboard when you are not using it.

The high quality of this display comes from a 17-inch (16.0-inch viewable image size) Mitsubishi Diamondtron CRT. These CRTs feature aperture grille technology for vivid colors and sharp text. And their vertically flat screens minimize glare to make your viewing more comfortable.

On-screen controls let you quickly adjust the Apple Studio Display to meet your specific needs and to compensate for changes in environmental conditions. The monitor meets strict worldwide standards for energy consumption, electromagnetic emissions, and recyclability.

Put all those features together and you have a high-quality display for a much lower price than you would expect. That makes the Apple Studio Display one of the best monitor values available for your Macintosh system--and one you will enjoy inside and out every day you use it.

Features

Superb Screen Quality

- 17-inch (16.0-inch viewable image size) Mitsubishi Diamondtron CRT
- aperture grill technology for vivid colors and sharp text
- vertically flat screen for reduced glare
