Apple Media Tool: Runtime Doesn't Reset Display Depth (8/95)

=====

Article Created: 17 August 1995

TOPIC -----

The display settings have changed after running a program created with the Apple Media Tool. Is there a way to have the display settings switched back their original state?

DISCUSSION -----

Runtime applications created by the Apple Media Tool automatically switch monitor settings to the color depth specified in the runtime. However, it does not switch them back to the original settings after quitting the runtime, so you must switch them back manually.
